

Let's work together
to keep the
community safe

Check before you dig

To make sure we can continue serving our communities safely and reliably, we need your help in preventing damage to our pipelines.

About Northern Gas Networks

We have over 1,200km of high-pressure gas pipelines transporting large volumes of gas at pressures above 7 bar. This can cause serious damage if our pipelines are ruptured, so it's important that you **speak to us before digging**.

Many of these pipelines run through rural areas. These same areas are increasingly of interest to developers of wind turbines and new housing.

Contacting us early in the planning stage of new projects will help avoid delays and ensure any new developments in the vicinity of our gas network are located and constructed safely.

Before you dig

If you are planning work that may have an impact on our network please get in touch so we can provide guidance on further steps you need to take and, if appropriate, a map of your area of interest showing the location of our gas pipeline.

1

Tell us if you're planning any **new developments near our pipelines**. We can help survey the area and ensure that you're **working at a safe distance**.

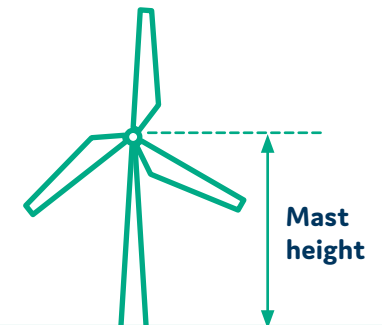

2

Check if our pipelines are in your area before you get started. We hold plans of all our pipelines so you can determine **what provisions you need to make before beginning work**.

3

Report damage as soon as possible. If you suspect damage to one of our pipelines, let us know as soon as possible so we carry out any repairs and minimise risk to you and the community.

Minimum distance between pipelines and wind turbines

Pipeline

1.5 x Mast height

Suspect damage?

Please call us as soon as you can on 0800 111 999

 @NGNgas

 @northerngasnetworks

At Northern Gas Networks, we look after the 37,000km of gas pipes across the North East, Northern Cumbria and much of Yorkshire.

We don't own the gas but it's our job to transport it safely to you.

Smell gas?
